

[Client] Medical Center Wireframe

Document Status:

BETA QUALITY

This document has been vetted for feasibility. All of the interfaces described here are possible given our current technology.

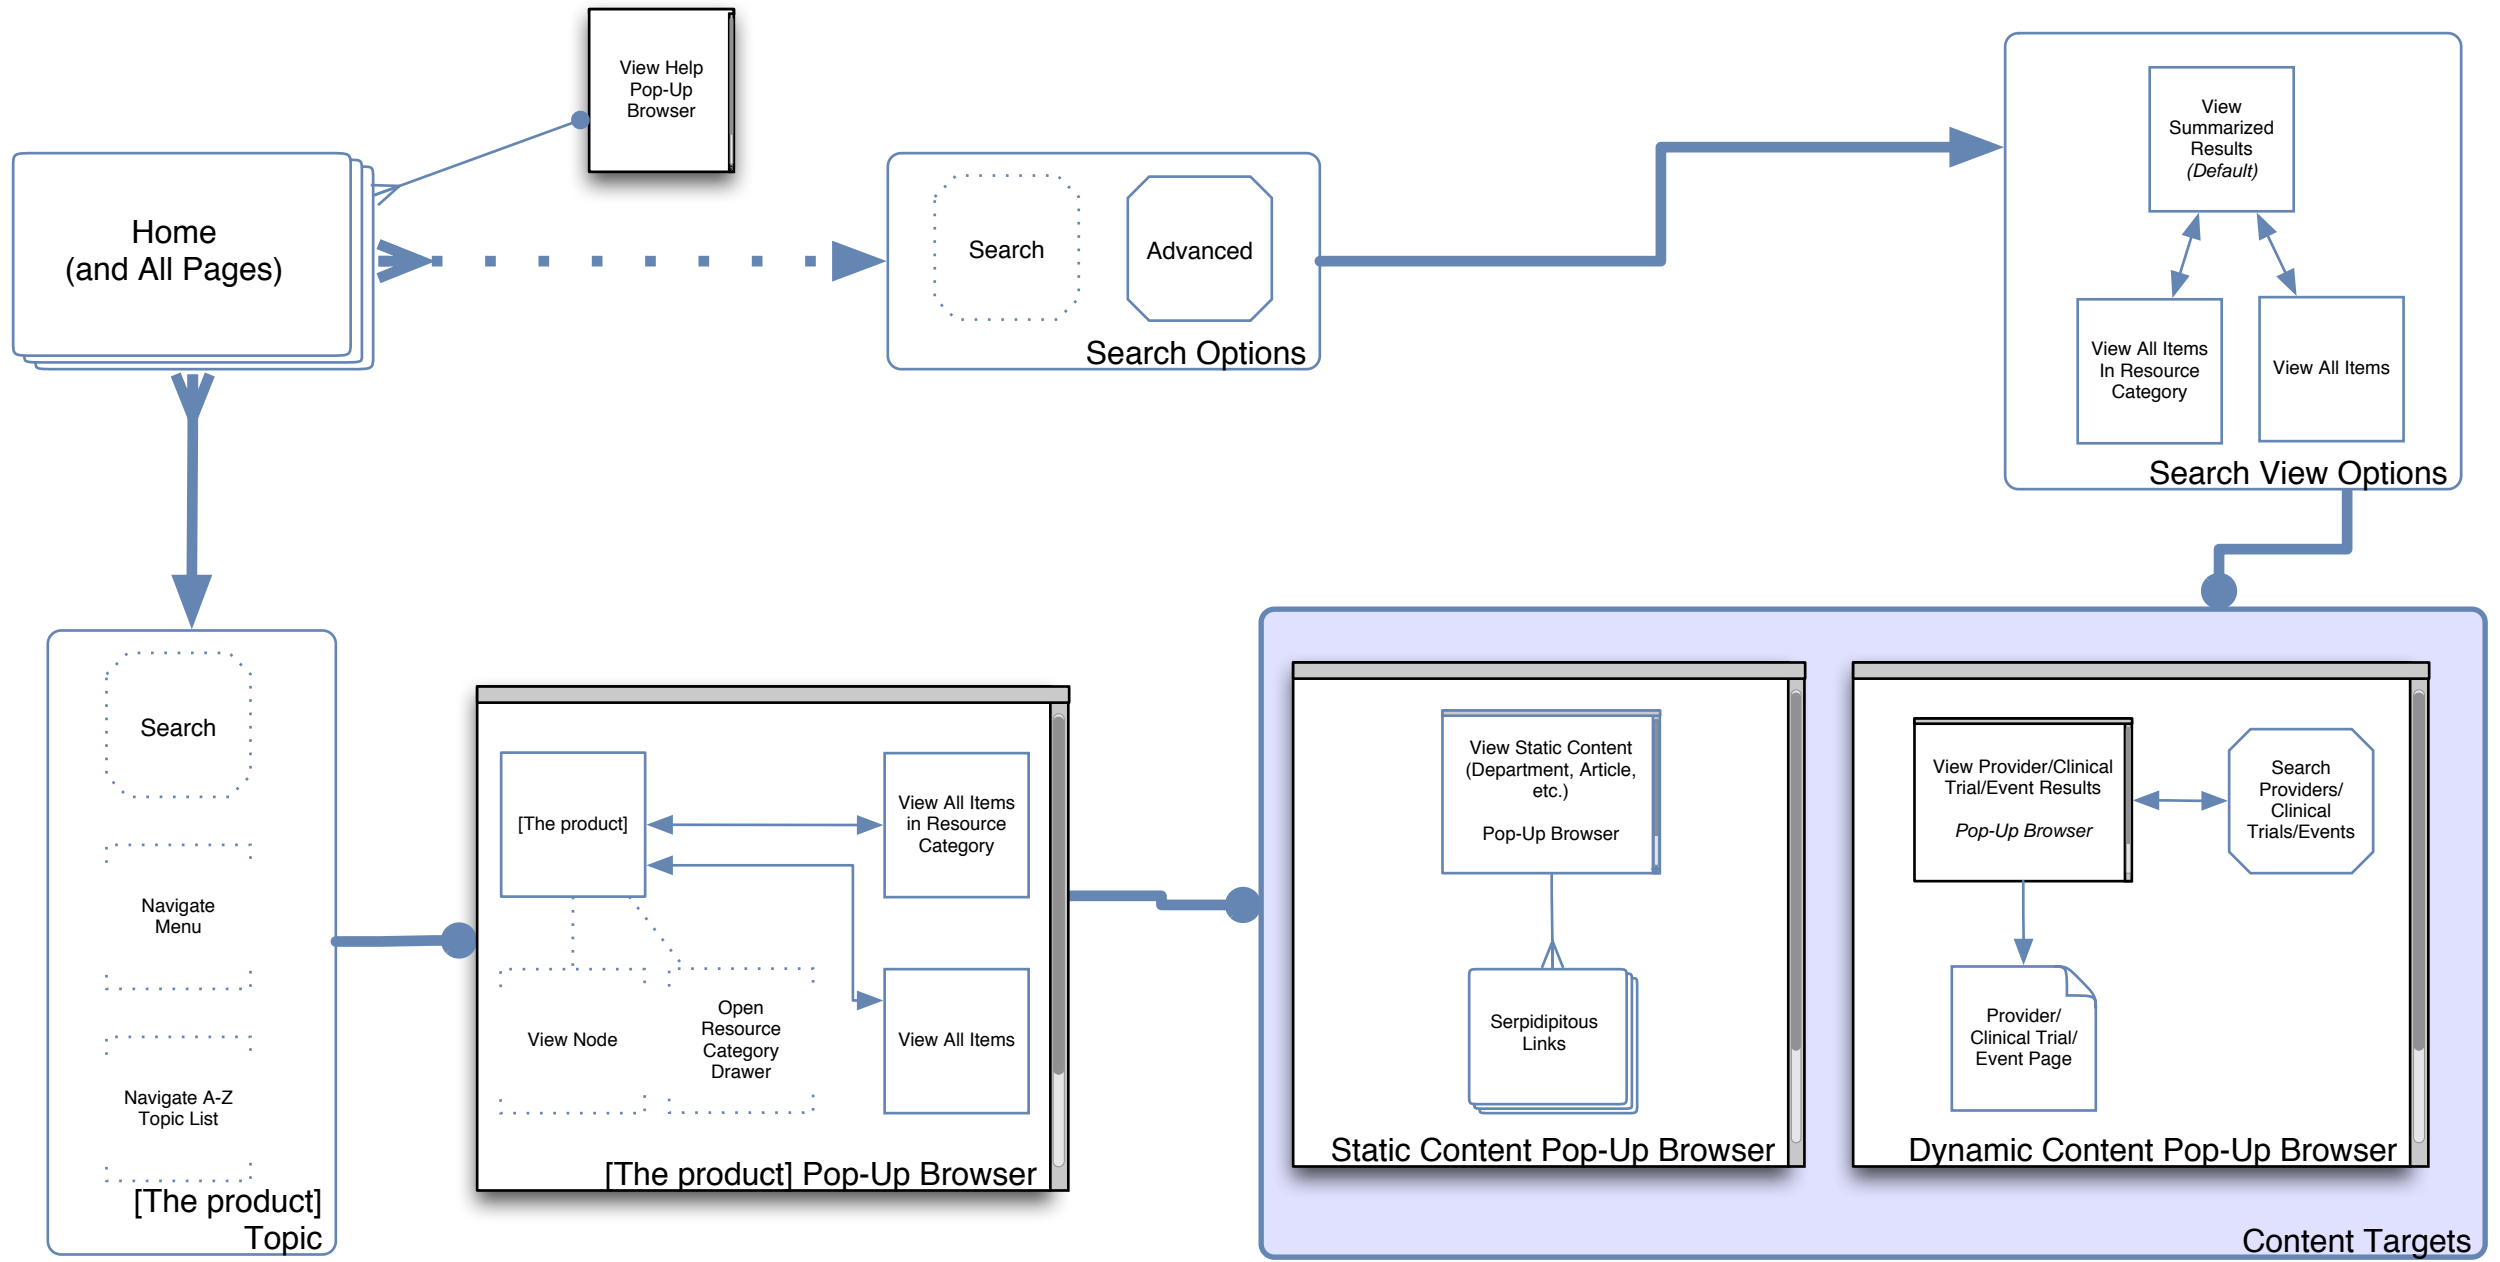

Next steps:

- 1) This document must be reviewed and edited by Product Development and other parties to determine what we want to present to the client.
- 2) After meeting with the client, this document will be edited again to match the client's expectations and staged releases as required.

Clinical Trials: 3 items were found.

What is this ?

[Find different Clinical Trials >>](#)

Berlex Trial

This is a double-blind, placebo controlled randomized study in patients with symptomatic angina, designed to test whether intracoronary injection of a viral vector carrying the gene for an angiogenic protein (FGF-4) will promote the formation of new blood vessels in the heart and improve both symptom status (reduce angina and increase exercise ability) and reduce coronary events.

Principle Investigator: Nathaniel Niles, MD

Study Coordinator: Sharon Segal, RN

GREAT (Guided Radio Frequency Energy Ablation of Total Occlusions) Trial

This is multicenter controlled trial to establish the safety and efficacy of the "IntraLuminal Safe-Cross Radio Frequency Total Occlusion System" when used to cross occluded native coronary arteries during an interventional procedure.

Principal Investigator: John Robb, MD

Sub-Investigator: John Jayne, MD

CAPTIVE (CardioShield Application Protects During Transluminal Intervention of Vein Grafts by Reducing Emboli) Trial

This is a multicenter randomized trial designed to establish the safety and efficacy of the MedNMova CardioShield Bare Wire Myocardial Protection System during PTCA and and stent treatment of coronary saphenous vein graft lesions.

Principal Investigator: John Robb, MD

Sub-Investigators: Bruce Friedman, MD, Bruce Hettleman, MD, John Jayne, MD, and Nathaniel Niles, MD

Notes

- System displays **breadcrumb** to the current location.
- 1) User activates **breadcrumb**: System navigates user to selected screen.
 - 2) User activates an **[A-Z] link**: System navigates user to the appropriate **[The product] Topic: Navigate A-Z Topic List**.
 - 3) User activates **sub-alphabetical link**: System navigates user to the appropriate section of screen.
 - 3.1) User activates menu components: System responds accordingly and navigates user to the appropriate screen.
 - 4) User activates search components: Search widget functions as described in **Home screen**.
 - 5) User activates **help**: System navigates user to *Alphabetical Topic List* specific **View Help screen**.
 - 6) User activates a **[The product] link**: System navigates user to the selected **View [The product] screen**.

Notes

This is a popup window (name: [The product]).

openItem cap is 5; closedItem cap is 1; defaultOpenDrawer is Departments & Resources

System displays popup window header and footer with **close window control**.

System displays the Selected [The product] and Selected Node.

System displays each [The product] resource category containing 1 or more items.

For each [The product] resource category, display:

- a) [The product] resource category total items as [(N)].
- b) [Show all N items >>] if there are more items than the item cap.
- c) [The product] resource category **help**.
- d) a [The product] resource category **drawer control**
- e) for open drawer: openItem cap items as **links**; for closed drawers: closedItem cap items as **link**

- 1) User activates **enlarge map link**: System navigates user to the **enlarge map screen**.
- 2) User activates **print page link**: System navigates user to the **print page screen**.
- 3) User activates **[The product] Node**: System navigates user to the selected node screen.

Selected [The product]: Coronary Artery Disease Evaluation

The flowchart details the evaluation process for Coronary Artery Disease. It starts with 'Coronary Artery Disease Evaluation' at the top, branching into 'Incidence', 'Cardiac Risk Factors', and 'Causes'. This leads to 'Symptoms', which includes 'Stable Angina', 'Early Detection of CAD', and 'Unstable Angina'. The next step is 'Evaluation by Physician', involving 'Cardiac Stress Tests', 'EKG and Heart Monitors', 'Atherosclerosis', and 'Heart ECHO'. This is followed by 'Catheterization', then 'Myocardial Infarction' (with 'Stable Angina' and 'Unstable Angina' sub-categories), and finally 'Coronary Artery Disease Medical Treatment', which includes 'Bypass Surgery', 'PTCA and Stenting', 'Heart Transplantation', and 'Internal Cardiac Defibrillator'. A 'Go Back To Congestive Heart Failure Protocol (1)' link is also present.
